MEMORANDUM FOR Redeploying Personnel

SUBJECT: Post-deployment Tuberculin Skin Testing

1. All personnel returning from OCONUS deployment locations are reminded that Tuberculin (TB) skin testing is required again between 90-180 days after being tested at Fort [Whatever](#) during the demobilization process.
2. This is required because some personnel who have been exposed to TB and test negative at Fort [Whatever](#) during the demobilization process may test positive later. Repeat testing 90-180 days after initial testing usually identifies these personnel.
3. Contact your State Surgeon's Office or your Reserve Support Command for locations of testing.
